JOB DESCRIPTION

AI-Native Full-Stack Developer PHP / JavaScript / Docker

Mid-Level | Full-Time | Remote

Role at a Glance

Reports To Head of Technology / CTO	**Experience** 2–5 years professional development
Employment Type Full-Time, Permanent	**Salary Range** £45,000 Per Annum

1. Role Purpose

We are looking for a mid-level developer who is as comfortable prompting a large language model as they are writing in PHP other languages. This is not a traditional backend role as it sits at the intersection of software engineering, AI tooling, and creative problem-solving. You will build and maintain web applications in PHP while actively integrating AI capabilities, automation pipelines, and third-party platform APIs into everything you touch.

You will join a small, fast-moving team where your work has direct visibility and impact. We expect you to bring strong foundational PHP skills and a genuine curiosity for, and practical experience with the AI-native development landscape.

2. Key Responsibilities

AI-driven development

- Design, build, and maintain robust web applications and APIs using standard web technologies such as PHP (8.x), JavaScript, etc.
- Work and customize coding agents such as Claude Code, Codex, OpenCode, etc.
- Write clean, testable, well-documented code and participate in code reviews
- Manage relational databases (MySQL / PostgreSQL)

DevOps

- Automate deployment using GitLab CI/CD pipelines
- Setup deployment hosts using Docker

AI & Automation Integration

- Integrate LLM APIs (OpenAI, Anthropic, Gemini, etc.) into our products and internal tooling
- Build and maintain AI-powered workflows - loop engineering, agents, and model orchestration
- Design and implement automation pipelines

- Stay current with fast-moving AI tooling and proactively identify opportunities to apply it

Multi-Platform & Cross-Stack Work

- Integrate with SaaS platforms, third-party APIs, and webhooks across a wide range of stacks
- Work with JavaScript / TypeScript and frontend frameworks (React, Vue, or similar) as well as PHP backends
- Deploy and manage services on cloud platforms and containerised environments using Docker
- Collaborate across the stack - you are not siloed into backend only

Collaboration & Ownership

- Work closely with product, design, and leadership in a lean startup environment
- Own features end-to-end: from scoping and architecture through to delivery and monitoring
- Contribute to technical decisions and help shape engineering practices as the team grows

3. Required Skills & Experience

- 2–5 years of professional software development experience.
- Strong, demonstrable PHP skills - including OOP, design patterns, and a major framework.
- Hands-on experience integrating AI/ML APIs or LLMs into real products (not just side projects).
- Practical experience with at least one automation platform or pipeline tool.
- Comfortable working across the stack and picking up new languages, tools, and platforms quickly.
- Solid understanding of REST API design, authentication (OAuth, JWT), and web security fundamentals.
- Experience with version control (Git), CI/CD pipelines, and cloud deployments
- Strong written and verbal communication - you can articulate technical decisions clearly.

4. Desirable Skills

- Experience with headless CMS, e-commerce platforms.
- Contributions to open-source projects or a visible personal/professional portfolio.
- Exposure to prompt engineering methodologies or AI agent frameworks.

5. The Ideal Candidate

You think of AI as a core part of your development toolkit, not an add-on. You are opinionated about quality but pragmatic in a startup context. You get things shipped and meet customer needs. You are self-directed, ask good questions, and take pride in building things that actually work at scale. You are excited by ambiguity and see the current AI moment as an opportunity, not a distraction.

6. What We Offer

- Competitive salary commensurate with experience.
- Flexible working arrangements. We’re a remote-friendly organisation.
- Direct exposure to leadership and meaningful influence over product direction.
- A culture that wants to invests in your growth.
- The chance to shape engineering culture from an early stage.

We are an equal opportunity employer and welcome applications from all backgrounds.
